

STAGE CURTAIN TRACK

MACTRAC STAGE TRACK

the *architects* choice

Mactrac Stage Track is a heavy duty cord-operated curtain track system developed for use in theatres, in school and church halls and as a room divider. It uses a premium quality extruded aluminium track with siliconed nylon carriers and glides for smooth effortless operation.

The pulleys are hardwearing nylon wheels with marine grade stainless steel casings for strength and durability. The system is operated by a 4mm braided nylon cord, which is tensioned by a spring tensioner.

The master carriers are made from ultra high molecular weight polyethylene (UHMWPE) for years of trouble free use.

It is recommended that the track system be fitted to a 150 x 50 mm timber bearer to ensure the track is both level and straight for maximum performance.

Ceiling fixing plates are used to attach the track to the bearer. These also act as supports when the track length dictates that joins are required. The system can be bent to suit special requirements.

Standard finishes are satin silver anodised and white powder coated. Special colours are available on request.

The following information is required for quotation or manufacturing purposes:

Plans of installation

Track finish (e.g. white powder coat, satin silver anodised)

Finished measurement of track

Measurement of stage width

Details of track height for cord drop

Cording requirements (left hand or right hand, 1 way or 2 way)

Size of overlap (300mm is standard)

Type of substrate available for fixing (150 x 50mm timber recommended)

Bend details

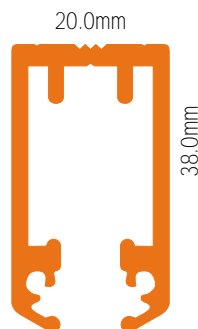

Any special requirements

The Mactrac Warranty of Quality applies for Mactrac Stage Track when it is installed by a qualified Mactrac approved installer.

If you have any queries, or there's something you need clarification on, please contact us.
